

Version Minor 2026.8.1 (1st patch of August 2026)

Changes between [2026.7.1](#) and [2026.8.1](#)

Current Changes

Languages (**All**)

- All internal translations got revisited, rewamped.

Command **/mod rolepanel** (+rolepanel)

- New command: give selected roles to a member through a panel.

Command **/mod unmuteall** (+unmuteall)

- New command to unmute all currently muted members at once.

Command **/mod unlockall**

- New command to unlock all channels at once.

Command **/mod tempmute** (+tempmute)

- Increased the maximum timeout duration to 28 days.

Command **/utils admin-roles**

- Added an alias: **allpa**.

Command **+move**

- You can now precise a voice channel by name directly in the command (ie: **+move 2h0 Voice 1**).

Module: **Music**

- **/music skip** (+skip) — added alias: **+next**.
- Fixed volume when a new track starts.
- Added support for Spotify links (Album/Track/Playlist) and Youtube Music track links.

Module: **Giveaways**

- Translated the **gw** command in French.
- Fixed giveaways typing (backend).

Module: **Server data on leave**

- New way to clear guild data when leaving (major change in philosophy). iHorizon now waits 10 hours before permanently deleting the server's data, allowing you to re-invite the bot and cancel the process if it was kicked by mistake, keeping the full config.

Module: PrevNames Logging

- Improving prevnames logging: also now logging guild nicknames.

Fun

- Added Autofeur sentence.

Internal improvements

- Removed Sweepers for guild Member.
- Major code improving in backend — unifying the context handler in Slash/Hybrid for better code support.
- Updates all libraries to the latest version.
- Fixing pm2 file for production.

Bug fixes

Command handler in PM channels

- *Fixing handler for command in PM channel.*

/utils userinfo

- *Fixing userinfo calculating Nitro with the banner or no.*

+sticker command

- *Fixing an issue with +sticker command.*

+antiexe command

- *Fixing +antiexe command permission.*
